

Sustainable Habitat Design

Innovative design services, catering to local contexts and specific needs

Why is it Important?

- Safety of vulnerable communities in high risk regions
- To reduce disruption of essential services during disasters
- To reduce carbon footprint by utilising local materials

What we do?

- Resilient habitat design
- Architecture for emergencies
- Ecological services and nature based solutions
- Climate resilient schools, health facilities & villages

How we add value?

- Ability to generate a catalogue of disaster resilient designs
- Access to in-house technical experts
- Experts in participatory approach
